Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Methyl Isobutyrate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Methyl Isobutyrate was approximately 32,000 tons, with an average selling price of about US\$3,500 per ton. Single-line production capacity was approximately 3,000 tons per year, with an average gross profit margin of about 20%. Methyl Isobutyrate is an organic compound that is a colorless, transparent liquid at room temperature and pressure, with a fruity odor. It is an important chemical raw material, mainly used as a solvent, fragrance, and intermediate in organic synthesis, and is also a standard substance for gas chromatography analysis. Upstream raw materials mainly include basic chemical raw materials such as isobutyric acid and methanol. Downstream applications are concentrated in the industrial and consumer sectors. On the one hand, it is widely used as an important solvent in the paint, coating, and ink industries; on the other hand, due to its apple, banana, and other fruity aromas, it is used as a food flavoring in food and beverages, and in smaller quantities in daily chemical fragrances.

The global Methyl Isobutyrate market size was estimated at USD 112.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
