## Abstracts

Methyl methacrylate (MMA) monomer is a colorless, volatile liquid ester of methacrylic acid, primarily used as a key intermediate in the production of polymethyl methacrylate (PMMA), also known as acrylic glass or by trade names such as Plexiglas or Lucite. It is characterized by its high transparency, weather resistance, and excellent optical properties, making it indispensable in industries such as automotive (for light covers and displays), construction (for glazing and sanitary ware), electronics (for light guides and screens), and paints and coatings (as a reactive diluent and film-forming agent). Its polymerization can be tailored to produce materials with varying molecular weights and properties, enabling applications ranging from medical devices and dental prosthetics to adhesives and impact modifiers. The monomer is typically produced via acetone cyanohydrin (ACH) or newer, more sustainable routes like ethylene-based or isobutylene oxidation processes, with its handling requiring strict safety measures due to flammability and potential health hazards.

The global Methyl Methacrylate Monomer market size was estimated at USD 6440.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
