## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Methyl Oleate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Methyl oleate is a fatty ester derivative, methyl ester derived from canola, soybean canola and other vegetable oils. Methyl oleate is used for a wide range of applications including bio-fuel, agrochemicals, lubricants, cleaners, metal working fluids, oiling agent for textile, solvents and personal care and cosmetics products. As an important link between the energy and agricultural products sectors, biodiesel has created a special technical path for the transformation of the two resources. On the one hand, the development of the biodiesel industry can consume excess agricultural resources, such as soybeans and other oil crops, realize disguised payments for the primary industry, and support agricultural product prices; on the other hand, when the price of traditional fossil energy rises, increasing production to produce biodiesel can make up for the supply in the energy market and achieve the effect of stabilizing the rise in energy prices. Therefore, the development of the biodiesel industry is conducive to some agricultural resource-rich countries to balance agricultural resources and energy resources. Take the United States as an example. As the world's largest producer and exporter of agricultural products, the United States has abundant agricultural resources. At the same time, ensuring energy security has always been regarded by the US government as an important prerequisite for ensuring national security. Therefore, the United States has established a large-scale transformation system through the development of biodiesel to enhance the structural resilience of energy supply and agricultural resource consumption. Methyl Oleate, as an important fatty acid methyl ester, is widely used in biodiesel, lubricants, surfactants, plastic plasticizers and cosmetics. In recent years, with the global green energy transformation and stricter environmental protection

regulations, the methyl oleate market has shown a steady growth trend.

The global Methyl Oleate market size was estimated at USD 95.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
