Abstracts

The Metro DC Traction Power Supply System is a core power system specifically designed for metro trains. Its primary function is to convert alternating current (AC) from the urban power grid into direct current (DC) of specific voltage levels, transmit it to the train traction system via a dedicated network, and simultaneously implement power supply control, protection, and energy optimization to ensure the safe and stable operation of metro trains. The price of a metro DC traction power supply system varies depending on the equipment type and specifications. DC switchgear typically costs between \$50,000 and \$150,000 per unit. Core components such as the rectifier equipment in a traction substation can cost from hundreds of thousands to millions of dollars per unit. Furthermore, auxiliary systems, such as the substation DC auxiliary power distribution system, cost approximately \$3,000 to \$18,000 per unit. The overall system price is also affected by factors such as project scale and technical requirements.

The global Metro DC Traction Power Supply System market size was estimated at USD 689.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
