The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on MF55 Thermistor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global MF55 Insulated Film NTC Thermistor production reached approximately 1860 million Pcs, with an average global market price of around US\$ 50.62 k Pcs. MF55 Insulated Film NTC Thermistor refers to a negative temperature coefficient (NTC) semiconductor ceramic component, characterized by a resistance value that decreases exponentially with increasing temperature. Its core material consists of metal oxides (e.g., manganese, nickel, cobalt), fabricated through ceramic processes and encapsulated with an insulating film for electrical isolation and environmental protection. Market driving factors Demand for miniaturization of consumer electronics: Thin-film technology enables a thickness of 0.5mm or less, suitable for high-density PCB designs. Explosion of new energy and automotive electronics: In the thermal management system of new energy vehicle batteries, NTC thermistors are used to monitor cell temperatures in real time.
