Abstracts

Mic Cable mainly used for the connection of microphones and audio equipment. It should be classified as weak current control cable in the cable category, and single-core or double-core outsourcing shielding is adopted. A cable is a thick wire, or a group of wires inside a rubber or plastic covering, which is used to carry electricity or electronic signals. They are made from electrically conducting materials that are secured with one or more insulation layers and carry electrical signals & aid the generation, transmission, and distribution of electric power. The major components of a cable are conductor, dielectric, and sheath. The conducting path for the electricity in a cable is provided by the conductor. The insulation helps in withstanding the service voltage and isolates the live conductor with other objects. The sheath restricts moistures to enter and protects the cables from all external influences like chemical or electrochemical attack and fire. The global cables market size was valued at \$200 billion in 2022, and is projected to reach \$365 billion by 2030, growing at a CAGR of 7.8% from 2022 to 2030.
