Abstracts

Microbrakes provide fast braking response in small, precise torque applications. Features a stator with integrated mounting flange, proprietary composite friction linings and an armature with annular leaf springs and hubs. Field-proven, these Miki Pulley Micro Brakes mechanically stop rotation by using an electromagnetic field to connect friction surfaces, creating mechanical resistance. With a fast response, the armature of the brake engages the stator when the coil is energized. Constant-force leaf springs transmit torque to the rotating brake body, stopping all motion.
