Report Overview

Micro-Coaxial Connectors are mainly used to connect digital signals between module boards by the differential transmission method using micro-coaxial cables. To perform appropriate signal transmission, the center conductor which transmits the signal, needs to be connected to the signal circuit on the board via the contacts of the connector. The outer conductor of the cable needs to be electrically connected on the board via metal parts of the connector referred to as the Shell. The electrical connection of the outer conductor to board through the connector shell is called 'grounding'.
