#### Report Overview

Micro cogeneration or Micro combined heat and power (micro-CHP) is a technology which generates heat and electricity simultaneously, from the same energy source, in individual homes or buildings.

Micro cogeneration packages (CP) are small footprint cogeneration units that generate electricity and hot water using gas. By connecting a CP unit to a building to supply power and hot water, a very high level of energy efficiency can be achieved. This high efficiency typically leads to lower energy costs and reduced CO2 emissions compared to remotely generated electricity from the power grid.
