Report Overview

A microcar is the smallest automobile classification, usually applied to very small cars (smaller than city cars). Such small cars were generally referred to as cyclecars until the 1940s. More recent models are also called bubble cars due to their bubble-shaped appearance.

Over the last few years, as growing environmental concern, increasing fuel price as well as traffic congestion globally, the emphasis on improving transportation facilities began to gather more attention. Thus, automobile manufacturers are breaking their dependency on heavier car models and managing to develop comfortable, affordable, low carbon emissions as well as fuel consumption small vehicles such as microcars. Thus, these tiny cars are finding appeal among consumers offered as an alternative to combat road traffic congestion. Moreover, as the companies are introducing new models, the microcars are gaining more popularity and competitiveness in the market. In many developing countries such as India, microcars are used as public transportation. In the U.S., people who own three-wheel microcars are benefiting from safety regulations as these microcars are categorized as motorcycles. The primary benefits to owning microcars include taxes, insurance credits as well as special parking are the factors which as boost the microcars market in the near future.
