Abstracts

Micro hybrid vehicles, also known as mild hybrids, are a category of electrified vehicles that utilize a small electric motor and a 48-volt battery system to assist the internal combustion engine (ICE), primarily during acceleration and to enable engine-off functionality at idle, but unlike full or plug-in hybrids, they cannot propel the vehicle using electric power alone and lack an external charging capability; this technology focuses on improving fuel efficiency and reducing emissions through features such as regenerative braking, stop-start systems, and torque assist, while maintaining lower manufacturing costs and simpler integration compared to higher levels of electrification.

The global Micro Hybrid Vehicles market size was estimated at USD 36500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
