Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Micro-LED competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Micro LED (Micro Light Emitting Diode) is a display technology composed of micron-sized (typically less than 100µm) self-emitting LED chips, enabling high brightness and high contrast display effects without the need for a backlight module. Technical Challenges: Mass Transfer: Millions of chips must be precisely transferred to the substrate, with a yield rate requirement exceeding 99.99%. Full-Color Technology: Mass production of RGB three-color chips is highly challenging, and quantum dot or phosphor conversion solutions still require optimization. Application Scenarios: Consumer Electronics: TVs (e.g., Samsung The Wall), smartphones, AR/VR headsets (e.g., Apple Vision Pro). In-vehicle Displays: HUD (Head-Up Display), instrument panels (e.g., Cy Vision and Mojo Vision collaboration project). Professional fields: Cinema screens (Lianard P0.9 certified by DCI), medical displays. Competitive landscape and future outlook Advantages of international giants: Samsung and Sony control the high-end market through patent barriers (such as mass transfer and driver chips), with the cost of a single MicroLED TV exceeding US\$100,000. Apple has acquired companies like LuxVue to expand into AR/VR, with technical capabilities leading the industry by 2-3 years. Breakthroughs by Chinese Companies: BOE and TCL Huaxing reduce costs through vertical integration of materials - equipment - terminals, with COB product prices 30% lower than international brands. Industrial clusters are being established in Hefei, Xiamen, and other regions, with companies like JBD and Shiyatech receiving over 5 billion yuan in government investment to accelerate mass production. Future Key Factors: Cost Reduction: ASMP equipment will reduce repair costs by 50%, with MicroLED TV prices expected to drop below \$20,000 by 2025. Application Expansion: Emerging

markets like AR/VR and in-vehicle displays will contribute over 60% of growth, with related chip revenue exceeding \$1 billion by 2030.

The global Micro-LED market size was estimated at USD 1506.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.70% during the forecast period.
