Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Micro Light Emitting Diode (LED) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Micro LED (Micro Light Emitting Diode) is a display technology composed of micron-sized (typically less than 100µm) self-emitting LED chips, enabling high brightness and high contrast display effects without the need for a backlight module. Technical Challenges: Mass Transfer: Millions of chips must be precisely transferred to the substrate, with a yield rate requirement exceeding 99.99%. Full-Color Technology: Mass production of RGB three-color chips is highly challenging, and quantum dot or phosphor conversion solutions still require optimization. Application Scenarios: Consumer Electronics: TVs (e.g., Samsung The Wall), smartphones, AR/VR headsets (e.g., Apple Vision Pro). In-vehicle Displays: HUD (Head-Up Display), instrument panels (e.g., Cy Vision and Mojo Vision collaboration project). Professional fields: Cinema screens (Lianard P0.9 certified by DCI), medical displays. Competitive landscape and future outlook Advantages of international giants: Samsung and Sony control the high-end market through patent barriers (such as mass transfer and driver chips), with the cost of a single MicroLED TV exceeding US\$100,000. Apple has acquired companies like LuxVue to expand into AR/VR, with technical capabilities leading the industry by 2-3 years. Breakthroughs by Chinese Companies: BOE and TCL Huaxing reduce costs through vertical integration of materials - equipment - terminals, with COB product prices 30% lower than international brands. Industrial clusters are being established in Hefei, Xiamen, and other regions, with companies like JBD and Shiyatech receiving over 5 billion yuan in government investment to accelerate mass production. Future Key Factors: Cost Reduction: ASMPT equipment will reduce repair costs by 50%, with MicroLED TV prices expected to drop below \$20,000 by

2025.Application Expansion: Emerging markets like AR/VR and in-vehicle displays will contribute over 60% of growth, with related chip revenue exceeding \$1 billion by 2030.

The global Micro Light Emitting Diode (LED) market size was estimated at USD 1506.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.70% during the forecast period.
