Report Overview

Micro-mobility refers to a category of lightweight transportation modes that typically operate at speeds below 25 km/h (15 mph) and are designed for short-distance urban travel, typically within 10 km. These vehicles are either human-powered or electrically assisted and include devices such as electric scooters (e-scooters), electric bikes (e-bikes), and other compact mobility vehicles. The core principle of micro-mobility is to offer a convenient, cost-effective, and eco-friendly solution to the "last mile" transportation problem in densely populated urban areas.
