Report Overview

A Micro Nano Bubble Generator or as it should be called according the ISO standards, an ultrafine bubble generator is a device that mixes water and a gas and produces nanobubbles. Nanobubbles should be smaller than 200 nano meter to be called a nanobubble. Since 200 nano meters is quite large to be called nanoscopic the name nanobubbles is not completely appropriate. For this reason, the ISO has named a nanobubble and ultrafine bubble. The naming convention follows the same names as for particles. Micro nanobubble and Nanobubble generators utilize pressurized dissolution, electrolysis or by swirling fluids in a mixing chamber and then feeding the fluids through a single shear point, injector, or venturi to produce air bubbles having a mean particle size of >200 nm. The majority of these systems require an external air supply and more importantly they do little to enhance the electrochemical properties of water.

The global Micro Nano Bubble Generator market size was estimated at USD 173 million in 2023 and is projected to reach USD 348.72 million by 2032, exhibiting a CAGR of 8.10% during the forecast period.

North America Micro Nano Bubble Generator market size was estimated at USD 51.56 million in 2023, at a CAGR of 6.94% during the forecast period of 2024 through 2032.
