### Report Overview

There are insurmountable obstacles in traditional optoelectronic technology, and it is difficult to meet the needs of the development of optoelectronic devices. The breakthrough of optoelectronic technology looks forward to the emergence of new materials, new principles, and new technologies. In recent years, the rapid development of micro-nano structure optoelectronic physics has exhibited a series of new physical phenomena and unique optoelectronic properties, providing a brand-new way for the realization of new functional optoelectronic devices. Micro-nano optoelectronic technology is one of the hot scientific research fields in the world today. It is a comprehensive frontier technology. It plays a very important role in the increasingly integrated and sophisticated development of optoelectronic devices. When the feature size of the microelectromechanical system is reduced to below 100 nanometers, it is also called nano electro mechanical system (NEMS, nano electro mechanical system). Due to the smaller size and new effects caused by nanostructures, NEMS devices can provide many features and functions that MEMS devices cannot provide, such as ultra-high frequency, low energy consumption, high sensitivity, unprecedented control over surface quality and adsorption, etc. . At present, domestic companies have not yet realized commercialized products of NEMS technology.

In China, Micro-nano Optical Electronic Integration key players include GOERTEK INC., AAC Technologies Holdings Inc, HangzhouSilanmicroelectronicsLimitedbyShareLtd, etc. Global top three manufacturers hold a share over 70%.

East China is the largest market, with a share about 55%, followed by South China, and North China, both have a share about 40 percent.

In terms of product, Microphone is the largest segment, with a share about 70%. And in terms of application, the largest application is Consumer Electronics, followed by Automobile, Medical, Industrial, etc.
