Abstracts

Micro single-lens reflex camera, full name micro single-lens electronic viewfinder camera, usually refers to a type of interchangeable lens camera that adopts a miniaturized design, has the image quality and some functions of a single-lens reflex camera, but removes the traditional reflector and pentaprism structure, and instead uses an electronic viewfinder or directly views the image through an LCD screen. This camera combines the characteristics of compactness and portability with the advantages of high image quality, providing a more flexible choice for photography enthusiasts. Despite the increasing competitive pressure from smartphone photography functions, micro single-lens reflex cameras still attract a large number of photography enthusiasts and professional photographers with their higher image quality, better optical zoom capabilities and more professional shooting modes. Future mirrorless cameras will have more built-in smart connection options, such as Wi-Fi, Bluetooth and even 5G modules, so that users can easily upload photos to social networks or cloud storage spaces.

The global Micro Single-Lens Reflex Camera market size was estimated at USD 3344.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.60% during the forecast period.
