Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Microbiome Cosmetic Product competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Global sales of microbiome cosmetic products reached 22,906,000 units in 2024, with an average selling price of US\$38.2 per unit. Microbiome cosmetic products are formulated with ingredients specifically formulated to modulate the skin's resident microbiome, replacing the traditional "killing" approach with "nurturing bacteria" to help maintain or restore the microecological balance, thereby strengthening the skin barrier, reducing sensitivity, and alleviating issues such as acne and dryness. The upstream supply chain primarily consists of bacterial strains and biofermentation raw materials. Strain suppliers include AOBiome, Gobiotics, IFF, Evonik, Bloomage Biotechnology, and Freda Biotechnology. The fermentation platform includes 5-20 m³ fermentation tanks, centrifugation/ultrafiltration, inactivation/lyophilization, and simultaneous purification of by-products (organic acids and peptides). Microbiome cosmetic products have evolved from "conceptual additions" to "evidence-based efficacy," with a clear industry chain division of labor and diverse technological approaches. With breakthroughs in AI-powered precision skincare, live bacterial formulations, and multi-area applications, this sector is expected to maintain double-digit growth over the next decade and become the next generation of skincare after "Clean Beauty."

The global Microbiome Cosmetic Product market size was estimated at USD 875.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.60% during the forecast period.
