Abstracts

Microcapsule curing agent is a special additive used in coatings, adhesives, inks, composite materials and other fields. It uses microencapsulation technology to encapsulate the curing agent in tiny capsules. When the coating or adhesive is affected by external forces or environmental factors under specific conditions (such as temperature, pressure, friction, etc.), the capsules rupture and release the curing agent, thereby initiating a chemical reaction to cure or enhance the properties of the material.

The global Microcapsule Curing Agent market size was estimated at USD 73.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
