Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Microcrystalline Cover Glass competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of microcrystalline cover glass reached 310.951 million pieces, with an average selling price of US\$2.48 per piece. Microcrystalline cover glass manufacturers can be categorized into upstream and midstream sectors. Upstream manufacturers primarily provide glass blanks, raw materials, processing materials, and processing equipment, including Gabrielle, Henan Tianma New Material Co., Ltd., Anhui Longhua Chemical Industry Co., Ltd., Huifeng Diamond Co., Ltd., JIASHENG TRADING CO., LTD., Hubei Chuda Intelligent Equipment Co., Ltd., INNO LASER TECHNOLOGY CO., LTD., Hymson Laser Technology Group Co., Ltd., Sunyes Manufacturing (Zhejiang) Holding Co., Ltd., and YouThought Corporation. LAS nano-ceramic glass is primarily made from lithium carbonate as a raw material, and significant price fluctuations can directly impact the cost and price of nano-ceramic glass. The microcrystalline cover glass companies listed in this report are considered midstream manufacturers. Glass-ceramics is a composite material whose structure, properties, and preparation process differ from those of ceramics and glass. It possesses the characteristic properties of glass while also incorporating the polycrystalline characteristics of ceramics, offering dual advantages. Glass-ceramics has a wide range of applications, including architecture, healthcare, solar energy, and other fields. High-strength transparent glass-ceramics cover plates are used in portable electronic devices such as mobile phones, smartwatches, tablets, and personal computers. The glass-ceramics used in mobile phone cover plates can have grains that reach the nanometer level, earning them the name nano-glass-ceramics. Glass-ceramics boasts superior surface hardness and drop resistance to high-

aluminum and lithium-aluminosilicate glass, representing the future of cover glass in the 5G era. Nano-glass-ceramics are a crucial material for smartphone cover glass, particularly high-end smartphones. The nano-ceramic glass business is experiencing rapid revenue growth and boasts high customer concentration. Furthermore, the nano-ceramic glass business boasts high but volatile gross profit margins. The price of nano-ceramic glass is closely tied to the price of its raw material, lithium carbonate, and R&D expenditures are high. Upstream nano-ceramic glass manufacturers boast higher gross profit margins, while midstream manufacturers, such as those involved in cover glass, enjoy larger revenue streams. The iPhone 12 debuted Corning's Ceramic Shield cover glass in 2020. Since then, Chinese brands, led by Huawei and Honor, have incorporated glass-ceramic into their high-end models. Continuous upgrades and iterations in recent years have continuously enhanced the performance of these cover glass. While nano-ceramic glass is primarily used in high-end phones priced above \$715, it has shown a trend of penetrating into cost-effective phones in recent years. The mobile phone glass market is expected to see competition among China, the United States, Japan, and Germany for the high-end market share.

The global Microcrystalline Cover Glass market size was estimated at USD 771.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.60% during the forecast period.
