Abstracts

Microducts are compact conduits specifically designed for housing and protecting microduct fibre optic cables. Typically ranging in size from 3 to 16 mm, these ducts enable efficient installation of small-diameter cables while optimizing the use of space. Microducts are often bundled together and placed within larger ducts to facilitate high-density deployments. Their flexibility, durability, and compatibility with modern cable installation methods, such as air-blown fiber, make them essential components in building advanced telecommunications and data transmission networks.
