Abstracts

Microecological preparations, also known as probiotics or microbial supplements, consist of live beneficial microorganisms such as bacteria and yeasts formulated to improve or restore the gut microbiota when administered in adequate amounts, with applications spanning human health (including dietary supplements, pharmaceuticals, and functional foods), animal husbandry (as feed additives to enhance growth and disease resistance), and agriculture (as biofertilizers or biopesticides to promote soil health and plant growth). These products are designed to confer health benefits by modulating the host's microbial balance, supporting digestive function, enhancing nutrient absorption, strengthening immune responses, and inhibiting pathogenic organisms through competitive exclusion and production of antimicrobial substances.

The global Microecological Preparation market size was estimated at USD 5280.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 10.25% during the forecast period.
