### Report Overview:

Microfiltration (MF) is a membrane filtration process that utilizes membranes with larger pore sizes than ultrafiltration. MF is primarily used to separate particles, microorganisms, and suspended solids from liquids. The process operates on the principle of size exclusion, where particles larger than the membrane's pores are retained while smaller particles and liquids pass through. Microfiltration systems and membranes find applications in various industries for purification, separation, and clarification purposes.

The Global Microfiltration Systems and Membranes Market Size was estimated at USD 1205.54 million in 2023 and is projected to reach USD 2010.71 million by 2029, exhibiting a CAGR of 8.90% during the forecast period.
