A Microgrid Management System (MMS) refers to an integrated suite of hardware and software solutions designed to monitor, control, and optimize the performance of a microgrid—a localized, self-contained energy network that can operate either connected to or independently from the main utility grid. These systems enable real-time management of distributed energy resources (DERs), such as solar panels, wind turbines, battery storage, and backup generators, while balancing energy supply and demand, ensuring grid stability, and maximizing economic and operational efficiency. Advanced MMS platforms incorporate forecasting algorithms, automated dispatch controls, and cybersecurity measures to facilitate energy trading, demand response, and resilience during grid outages or fluctuations.

The global Microgrid Management System market size was estimated at USD 1850.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.40% during the forecast period.
