Report Overview

Nano 3D printing technology can produce high-precision parts with dimensions less than 100 nanometers. In terms of size, nano 3D printing and micron-level 3D printing are both micro 3D printing technologies. Unlike ultra-large-scale 3D printing technology, micro-3D printing (microns are a thousand times larger than nanometers, but still only one-thousandth of a millimeter) is the other extreme—a move toward smaller sizes. Additionally, microscopic 3D printing has the potential to fundamentally disrupt the medical device field due to its more precise and less invasive nature. Equipment used in surgery and laboratories often requires high precision and high surface finish, and is usually produced in small batches.

The global Micron and Nanoscale 3D Printer market size was estimated at USD 81.80 million in 2023 and is projected to reach USD 346.55 million by 2032, exhibiting a CAGR of 17.40% during the forecast period.

North America Micron and Nanoscale 3D Printer market size was estimated at USD 28.15 million in 2023, at a CAGR of 14.91% during the forecast period of 2024 through 2032.
