## Abstracts

The microneedle performance testing service is a professional testing service for microneedles, a micro medical device, which aims to evaluate its key performance indicators such as mechanics, transdermal and material stability through systematic experiments. This service uses high-precision mechanical analysis instruments to quantitatively measure the mechanical parameters of microneedles, such as yield strength, fracture load, and elastic modulus, and combines biological tissue simulation experiments (such as pig skin penetration tests) to verify its transdermal efficiency and puncture safety. In the material stability test, the service covers long-term monitoring of parameters such as microneedle matrix hardness, viscosity, and Young's modulus to ensure the stability of its performance during storage and use. Through multi-dimensional data collection and analysis, this service can provide a scientific basis for the design optimization, quality control and clinical application of microneedle products, and help pharmaceutical companies and medical device research and development institutions to achieve precise regulation and risk control of product performance.
