## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Microporous Membrane Folding Filter Cartridge competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Microporous membrane folding filter cartridge is a highly efficient filter element composed of folded microporous membranes. It is used to separate suspended particles in liquids and gases. It is usually made of microporous membrane materials such as polypropylene (PP), nylon (Nylon), polyether sulfone (PES) or polytetrafluoroethylene (PTFE). Its core is a microporous membrane that has been "folded" to increase the filtration area and combine it with the support layer to form a wrinkle structure, thereby achieving high filtration accuracy, large intake amount, low pressure difference and long life. The filter element is assembled using hot melt welding technology and does not contain glue. It can effectively avoid secondary pollution and is widely used in precision filtration fields such as medicine, food, electronics, and chemicals. In 2024, global Microporous Membrane Folding Filter Cartridge production reached approximately 239 M Units, with an average global market price of around US\$ 8136 per K unit.

The global Microporous Membrane Folding Filter Cartridge market size was estimated at USD 1946.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
