Report Overview:

Microscope slides and cover glass Slides are transparent glass sheets used in biological experiments. The length and width of the slides are about 75 mm and 26 mm, and the thickness is 1 mm. They are used as samples for loading and viewing under a microscope. The sample will be fixed on a glass slide and moved together to be observed under the microscope. The slide is of such a size that multiple samples can be viewed sequentially under the microscope, removed from the microscope, labeled, shipped, and stored in an appropriate manner. The slide will most likely be fitted with another smaller, thinner sheet of clear glass called a coverslip. Cover slips are placed on top of the samples and slides.
