Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Microwave Ablation Therapy Device competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Microwave Ablation Therapy Device production reached approximately 6792 units, with an average global market price of around K US\$ 88.9 per unit. A microwave ablation (MWA) therapy device is a minimally invasive tumor treatment system that utilizes high-frequency electromagnetic waves (typically 915MHz or 2450MHz) as an energy source. The device percutaneously inserts a coaxial microwave antenna (ablation needle) precisely into the center of the tumor tissue. The antenna generates a high-frequency alternating electric field in the surrounding area, causing polar molecules (primarily water molecules) within the tissue to undergo rapid friction and collisions. This rapidly generates localized high temperatures of 60-150°C, leading to irreversible coagulative necrosis of tumor cells. The necrotic tissue is eventually absorbed by the body, achieving the goal of "in-situ inactivation" of the tumor. The prevailing market view is that microwave ablation is entering a period of rapid development as a key modality in interventional oncology. Key drivers include the increasing number of early-stage patients due to the popularization of early cancer screening, the growing acceptance of minimally invasive treatment concepts, and the clinical demand for larger and more uniform ablation zones. Future competition will extend beyond mere power specifications to intelligent surgical planning, real-time multi-dimensional treatment assessment (e.g., fusion imaging), and integration with surgical robotics. Manufacturers capable of providing integrated solutions encompassing image navigation, energy control, and treatment evaluation will secure a lasting competitive advantage.

The global Microwave Ablation Therapy Device market size was estimated at USD 604.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
