Abstracts

A microwave moisture analyzer is an industrial-grade instrument designed to accurately measure the moisture content in solid, liquid, or granular materials by utilizing microwave technology, wherein the sample is exposed to microwaves and the moisture level is determined based on the absorption or attenuation of microwave energy, as water molecules possess a high dielectric constant that causes them to interact strongly with electromagnetic waves; this method allows for rapid, non-destructive, and precise moisture determination across various industries such as pharmaceuticals, food processing, chemicals, agriculture, and construction, where controlling moisture is critical for product quality, process efficiency, and regulatory compliance.

The global Microwave Moisture Analyzer market size was estimated at USD 185.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.85% during the forecast period.
