Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Microwave Sensor and Infrared Sensor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Microwave sensors and infrared sensors are two common non-contact motion detection devices, which are widely used in scenarios such as smart lighting, security monitoring and automatic doors. Microwave sensors sense the movement of objects by emitting high-frequency electromagnetic waves (usually 5.8GHz) and detecting changes in their reflection. They have the characteristics of strong penetration and high adaptability, and are suitable for non-metallic obstruction environments such as glass and plastic. Infrared sensors are based on the pyroelectric principle, sensing changes in infrared radiation emitted by heat sources such as the human body to determine whether there is movement. The advantages are low false touch rate and low energy consumption. The two are often used in combination to improve sensing accuracy and environmental adaptability.

The global Microwave Sensor and Infrared Sensor market size was estimated at USD 3756.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.40% during the forecast period.
