Abstracts

Mid-infrared laser gas analyzer is a gas analysis instrument that uses mid-infrared lasers (such as quantum cascade lasers) as light sources. It uses the characteristics of gas molecules having strong absorption peaks in the mid-infrared band to determine the concentration of the gas by measuring the selective absorption of laser by the gas. This instrument usually has the characteristics of high precision, high sensitivity and high resolution, and can monitor the changes of various gas components in real time. With the continuous development of laser technology and spectroscopy technology, the performance of mid-infrared laser gas analyzers will continue to improve. For example, by optimizing the design of the laser and improving the spectral resolution, the sensitivity and accuracy of the analyzer can be further improved. The application areas of mid-infrared laser gas analyzers are constantly expanding. In addition to traditional industrial, environmental protection and scientific research fields, they can also be expanded to emerging fields such as food safety and medical diagnosis. The growing demand for gas analysis in these fields provides a broad market space for the development of mid-infrared laser gas analyzers.

The global Mid-infrared Laser Gas Analyzer market size was estimated at USD 486.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.50% during the forecast period.
