### Report Overview:

A field-programmable gate array is an integrated circuit designed to be configured by a customer or a designer after manufacturing –hence 'field-programmable'. The FPGA configuration is generally specified using a hardware description language, similar to that used for an application-specific integrated circuit. Circuit diagrams were previously used to specify the configuration, but this is increasingly rare due to the advent of electronic design automation tools.

The Global Mid-Range FPGA Market Size was estimated at USD 2354.66 million in 2023 and is projected to reach USD 5141.27 million by 2029, exhibiting a CAGR of 13.90% during the forecast period.
