Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Middle Temperature ZnO Desulfurizer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Middle Temperature ZnO Desulfurizer is a solid adsorbent utilizing zinc oxide (ZnO) as the active component for selective removal of sulfur compounds (e.g., H₂S) from gases at moderate temperatures (200-400 °C). Its desulfurization mechanism relies on chemical reactions between ZnO and sulfur compounds, forming stable zinc sulfide (ZnS) products. The material requires high specific surface area, porosity, and sintering resistance to sustain long-term activity and minimize side reactions (e.g., methanation or coking). Its performance is significantly influenced by temperature, space velocity, and sulfur compound concentration.

The global Middle Temperature ZnO Desulfurizer market size was estimated at USD 125.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Middle Temperature ZnO Desulfurizer market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
