### Report Overview

An airborne laser (ABL) is a laser system operated from a flying platform. Airborne lasers when fired, have enough energy to vaporize the metal of the missile that it is currently targeting. It deposits enough heat to laze a hole through it. It's like taking a magnifying glass and burning a hole through a piece of paper, but airborne lasers do it through metal.

Operational costs of an airborne laser are quite high. And the projected cost of the program was listed as 5.1 million USD in 2009 according to the US Department of Defense.
