Abstracts

Military analog ICs are analog integrated circuits designed specifically for military and defense applications, with the characteristics of high reliability, high precision, anti-interference and wide temperature range. They play a key role in aviation, aerospace, weapons, ships, communications, radar and other fields, and are indispensable core components of modern military equipment. Chinese domestic companies are experiencing faster growth than the global market, primarily benefiting from the 14th Five-Year Plan's support for military electronics and its goal of increasing domestic content. Amidst this surge in domestic substitution, domestic manufacturers are experiencing rapid growth. Domestic military analog IC companies started relatively late, primarily comprised of research institutes within the Chinese government. This has long led to a significant gap in process and technology compared to international standards. In recent years, with the development of the semiconductor industry and support from industrial policies, the gap between military analog integrated circuits and internationally advanced levels has gradually narrowed. At present, the main participants in the military analog IC market include the 24th Institute of China Electronics Technology Group Corporation, the 771st Institute of China Aerospace Science and Technology Corporation, the Tianshui 749th Factory, the Jinzhou 777th Factory, etc. In addition, companies such as Zhenhua Fengguang, Zhenlai Technology, and Chengchang Technology are also developing rapidly in the military analog IC industry.

The global Military Analog IC market size was estimated at USD 6017.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
