Report Overview

Military body-worn cameras are, roughly, the traditionally hand-held or uniform-attached surveillance cameras that perform the basic function of capturing and storing images and videos for future references. These are usually small in size and can be clipping on the uniform, mounted on the helmet, glass integrated, button pinhole, and clipped on the holster; depending on the type of mission that is being undertaken.

The homeland security sector accounted for the most of the revenue market shares and will continue to lead the market in the coming years. This sector comprises law enforcement agencies like the city police force, crime investigators, intelligence gathering departments, traffic police, and security officers or guards. These departments work with the police department on a daily basis and are required to collect and protect evidence to support claims. Moreover, several law enforcement agencies around the world have been taking initiatives to strengthen public confidence in police forces and to moderate the interaction between the police and the public, which will lead to the augmented adoption of military body-worn camera over the next few years.
