## Abstracts

Chip is a general term for semiconductor component products, also known as microcircuit, microchip, and integrated circuit. It refers to a silicon wafer containing integrated circuits. It is small in size and is often part of a computer or other electronic equipment. Military chips, generally referring to chips used in the fields of national defense and military, are the core and foundation of modern military technology. Products are widely used in radars, computers, communication equipment, navigation equipment, fire control systems, guidance equipment and electronic countermeasures equipment, etc. on military equipment. Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0% year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.

The global Military Chips market size was estimated at USD 1168.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
