A Mine Lifting Bag is a specialized underwater buoyancy device used for the safe lifting, recovery, and relocation of naval mines, unexploded ordnance, or heavy underwater objects. It operates by filling the bag with compressed air, generating controlled buoyant force that allows precise elevation and movement of submerged loads. Mine Lifting Bag is a specialized inflatable bag designed for underwater lifting and recovery of mines or other sunken objects. Its upstream supply chain primarily includes suppliers of raw materials and components such as high-strength waterproof canvas, polyurethane or rubber composite materials, inflation valves, and safety control systems. These materials ensure the lifting bag's pressure resistance and reliability. Downstream applications span naval or civilian salvage agencies, diving salvage companies, and marine engineering firms for mine clearance, wreck recovery, or subsea operation support. The entire supply chain centers on marine protection materials and specialized salvage services, with raw material costs constituting a significant portion of product expenses. Downstream demand is driven by naval operational requirements and underwater salvage projects.
