Report Overview

Military non-steerable antenna refers to a type of antenna system used in military applications that cannot be electronically or mechanically steered in a particular direction. These antennas are designed to be fixed in a specific direction or provide a broad coverage area for communication and other military purposes. Unlike steerable antennas, non-steerable antennas do not require any motors or servos to change their direction, making them simpler and more rugged. They are often used in situations where a simple, reliable, and low-cost antenna solution is required, such as in fixed communication links or ground-to-air communication systems.
