Report Overview

Military radars may be used to detect a wide range of targets including people, moving vehicles, aircraft and helicopters, and UAVs (unmanned aerial vehicles). They can be highly useful for counter-UAS applications as they may be able to detect drones that are flown very low to the ground to avoid detection by other systems. The radar systems may be able to classify targets based on size and movement patterns, with the ability to distinguish small drones from other objects such as birds.
