### Report Overview

Rechargeable or secondary military batteries have higher energy density, higher capacity, and longer cycle life than non-rechargeable batteries, making them ideal for extreme temperatures and rough military terrains. They are also cost effective as they can be recharged using an external power source. Rechargeable batteries are used during peacetime, training, garrison operations, as well as for certain combat uses as they are easily transported. Some of the popular rechargeable batteries used for military applications are Nickel Cadmium (NiCd) batteries, Lithium-ion (Li-ion) batteries, and Lithium-ion polymer batteries. Secondary military batteries are subject to normal self-discharge, thus they incur maintenance costs. Proper maintenance procedures need to be followed depending on their application, environmental conditions, and their chemical composition.
