Abstracts

Military semiconductors, also known as military-grade semiconductors or military ICs (Integrated Circuits), are electronic components specifically designed and manufactured to meet the stringent requirements and standards of the military and defense industry. These semiconductors play a critical role in various military applications, including communication systems, radar systems, avionics, guided missile systems, and more. Military semiconductor components are expected to operate reliably and withstand extreme environmental conditions, electromagnetic interference, and potential exposure to radiation and other hazards. The global market for semiconductor was estimated at US\$ 579 billion in the year 2022, is projected to US\$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.

The global Military Semiconductor market size was estimated at USD 8099.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
