Abstracts

Milk pump controllers are specialized electronic devices used in dairy farming to automate and regulate the operation of milking machines, ensuring consistent and efficient milk extraction while maintaining animal welfare. These systems typically monitor and control vacuum levels, pulsation rates, and milking duration, often integrating with herd management software to track individual cow performance, detect abnormalities like mastitis, and optimize milking routines. Advanced models may feature automated teat cup attachment, data logging, and remote monitoring capabilities, contributing to increased productivity, reduced labor costs, and improved milk quality by minimizing overmilking and contamination risks.
