Report Overview

Milking robots, also known as robotic milking machines, automatic milking systems (AMS) or voluntary milking systems (VMS), were developed in the late 20th century. They have been commercially available since the early 1990s. The core of such systems that allows complete automation of the milking process is a type of agricultural robot. Common systems rely on the use of computers and special herd management software. The milking robot consist of a master control computer, milking robot, milking equipment, import and export control system, cow individual identification device. With the milking robot, it is possible to supply an individual cow with all her needs for an optimal health, production and well-being, without the extra labor. The basis of successful dairy farming is the healthy and happy individual cow.
