Abstracts

Milling turning centers, also known as mill-turn machines or multitasking machines, represent a sophisticated class of computer numerical control (CNC) equipment that integrates both milling and turning capabilities within a single platform, enabling the complete machining of complex parts?such as those with rotational symmetry combined with off-center features, cross-holes, or contoured surfaces?in a single setup. These systems typically feature a rotating spindle for turning operations alongside live tooling and multiple axes (often including Y-axis, B-axis, or sub-spindle functionality) to perform milling, drilling, and tapping without requiring part transfer between separate machines, thereby enhancing precision, reducing cycle times, minimizing handling errors, and streamlining production workflows for industries demanding high accuracy and efficiency.

The global Milling Turning Centers market size was estimated at USD 3500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
