Report Overview

Once a mine reaches a depth of 800m or 1000m, productivity and working conditions inside the mine become increasingly difficult due to the increase in temperature. For miners to be able to work safely and productively, the ambient air has to be cooled to a wet-bulb temperature of approximately 28°C. At this time, it is particularly important to install the Mine Cooling System in the mine. The Mine Cooling System can maintain the mine to normal production temperature, ensuring the smooth progress of the work and the safety of the workers.
