Abstracts

A downstream application of mining control systems is mining. The demand for metal minerals has generally declined, but new energy minerals have grown against the trend. Due to the global economic downturn, traditional industries have been affected, and the consumption of bulk minerals such as iron, manganese, and aluminum has declined. The new energy and new material industry has grown against the trend, driving the rapid growth of copper, lithium, cobalt and other new energy mineral consumption. Mining policies in major countries and regions have undergone intensive adjustments, and the mining investment environment has differentiated. Challenges and opportunities coexist. Affected by multiple factors such as economic recession, geopolitics, international trade, and investment obstruction, there are still risks in global mining investment.
