Abstracts

Mine neutralization systems are specialized naval or military assets designed to detect, identify, and render safe or destroy naval mines, which are explosive devices placed in water to damage or destroy ships or submarines. These systems can be deployed from surface vessels, submarines, aircraft, or unmanned underwater vehicles (UUVs) and typically employ methods such as physical disruption, controlled detonation, or electronic countermeasures to neutralize threats without triggering the mine prematurely. Key components often include sonar for detection, remotely operated vehicles (ROVs) for close inspection and intervention, and advanced software for mine classification and mission planning. The technology is critical for ensuring safe maritime passage, protecting naval assets, and supporting humanitarian demining operations in conflict or post-conflict zones.

The global Mine Neutralization System market size was estimated at USD 125.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
