## Abstracts

Demand for metal minerals has generally declined, but new energy minerals have grown against the trend. Due to the global economic downturn, traditional industries have been affected, and the consumption of bulk minerals such as iron, manganese, and aluminum has declined. The growth of the new energy and new material industries bucked the trend, driving the rapid growth of the consumption of copper, lithium, cobalt and other new energy minerals. The mining policies of major countries and regions are intensively adjusted, and the mining investment environment is divided. Challenges and opportunities coexist. Affected by multiple factors such as economic recession, geopolitics, international trade, and investment obstruction, global mining investment still has risks.

The global Mine Rescue Equipment market size was estimated at USD 501.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
